About This Guide

Integration is no longer about connecting software. It's about connecting decisions. As enterprises adopt AI, automation, and event-driven systems, the old rules of middleware can't keep up. Data moves faster, logic shifts constantly, and business context changes by the hour.

This guide helps CIOs, CTOs, and digital leaders evaluate integration strategies for the AI era. It distills complex architecture choices into clear principles, so you can choose platforms that don't just connect systems, but create flow.
