

AI + Low-Code Platform

Build Smart Applications 5x Faster

Build enterprise applications in weeks, not months. The AI + Low-Code Platform accelerates development with visual design, automation, and secure integrations

BACKGROUND

Enterprises are under pressure to deliver new digital experiences quickly, but IT backlogs keep growing. Business teams often fill gaps with spreadsheets and shadow IT, while AI remains difficult to embed inside real business workflows.

Anubavam's AI + Low-Code Platform helps fusion teams build secure, scalable applications in weeks, combining a visual builder with AI-assisted development and enterprise-grade governance.

CHALLENGE

Teams today struggle with:

- Long application and automation backlogs IT cannot keep up with
- Shadow IT systems creating risk and process fragmentation
- Difficulty embedding AI reliably and securely into operational workflows

Without a unified low-code + AI foundation, enterprises cannot scale innovation safely.

SOLUTION

The AI + Low-Code Platform enables teams to design, automate, and launch production-ready applications rapidly, with guardrails and AI assistance built in.

With the AI + Low-Code Platform, you can:

- Design applications visually, assisted by AI prompts for forms, flows, and rules
- Integrate legacy and SaaS systems using prebuilt, enterprise-tested connectors
- Embed AI capabilities such as classification, summarization, prediction, and chat

Key Capabilities:

- **Visual App Designer:** Drag-and-drop interfaces and workflows
- **AI-Assisted Development:** Natural language generates flows, rules, validations
- **Workflow Automation:** Approvals, SLAs, escalations
- **Integration:** Connect CRM, ERP, HR, finance, identity systems, and APIs
- **Enterprise Security:** Role-based access, encryption, SSO, audit logging
- **Global Scale:** Multi-tenant, multi-region, compliance-ready

RESULTS

Organizations achieve:

- 3–5× faster app and workflow delivery
- Lower development and maintenance costs
- Reduced risk from manual, spreadsheet-driven processes

Sample Use Cases:

- Request intake, onboarding, and approval workflows
- AI-assisted knowledge engines and self-service portals
- HR, finance, operations, and customer-service applications

WHY ANUBAVAM

- Proven delivery of low-code and AI platforms in regulated, high-stakes industries
- Blend of product engineering, UX, and change-management expertise
- Governance frameworks that keep low-code from turning into low-control

Discover how your teams can deliver AI-powered applications in weeks.
